WHY BIO-BASED?

There have been several U.S. Government initiatives over the past five years to increase our support of the agricultural industry and reduce dependency on petroleum resources. In the United States, the Farm Security and Rural Investment Act (FSRIA) addresses bio-based products and defines them as commercial or industrial products that are composed, in whole or significant part, of biological products or renewable domestic agricultural materials or forestry materials. Therefore, industrial products, such as surfactants and solvents are now being produced from renewable plant resources, which are typically biodegradable, friendlier to the environment and supportive of the agricultural industry. In America, the U.S. federal government has mandated, through the FSRIA, that federal agencies purchase biobased products whenever possible.

BIO-BASED FORMULA SEAL:

The bio-based seal, found on product labels and literature, allows end users to easily identify the biobased content in each BioRenewables product. The seal on BioRenewables Glass Cleaner RTU Handi Spray guarantees that, at minimum, 81 percent of ingredients are made from renewable resources.
